

Outputs of Distingo Context

Below is listed the XML description of the representation in description logics of a text submitted to Distingo Context.

Tags:

`<phrases></phrases>` : The content of this node is composed of all the phrases of the text.

`<phrase></phrase>` : The representation of a phrase. The representation contains at least a subject node and may also contain a verb and a predicate node.

`<subject></subject>` : The representation of the grammatical subject. This representation contains a noun node and may also contain one or more attribute nodes.

`<verb></verb>` : The representation of the verb. It contains the uninflected form of the verb.

`<predicate></predicate>` : The representation of a predicate. This representation contains a noun node and may also contain one or more attribute nodes.

`<noun></noun>` : The representation of the noun. It contains the uninflected form of the noun.

`<attribute></attribute>` : The representation of an attribute (adjective, etc). It contains the uninflected form of the attribute.

Note that all phrases having the same subject (only the noun is taken into account) are grouped and will be represented one after the other.

Complex phrases (with more than one verb) are split into simple phrases.
